

Nama : Salamah Nur Aqidah  
Kelas : Web  
Program: Tech Muda 4

## Menampilkan dan Menambahkan Data Jabatan

- Tampilan master data jabatan

The screenshot shows the 'Master Data' page of the Tech Muda 4 App. The page has a header with the app name and navigation links. Below the header is a table titled 'Data Jabatan' with two columns: 'No' and 'Nama Jabatan'. The table contains six rows of data. To the right of the table is a sidebar with navigation links. The page also features a footer with the text 'Tech Muda Batch 4' and 'Design by salnuraqidah @2020 NF Computer'.

| No | Nama Jabatan    |
|----|-----------------|
| 1  | Admin           |
| 2  | Asisten Manager |
| 3  | General Manger  |
| 4  | Manager         |
| 5  | Staff           |
| 6  | Supervisor      |

- Tampilan input data jabatan

The screenshot shows the 'Form Jabatan' page of the Tech Muda 4 App. The page has a header with the app name and navigation links. Below the header is a form titled 'Form Jabatan' with a text input field for 'Nama Jabatan' and a 'Simpan' button. To the right of the form is a sidebar with navigation links. The page also features a footer with the text 'Tech Muda Batch 4' and 'Design by salnuraqidah @2020 NF Computer'.

- Models/Jabatan.php

```
<?php
```

```
class Jabatan{
//member1 var
private $koneksi;
//member2 constructor
public function __construct(){
global $dbh; //panggil var instance pdo
$this->koneksi = $dbh;
}
//member3 fungsi2 crud
public function dataJabatan(){
$sql = "select * from jabatan";
//prepare statement PDO
$ps = $this->koneksi->prepare($sql); //persiapan
$ps->execute(); //eksekusi
$rs = $ps->fetchAll(); // ambil seluruh baris data
return $rs;
}
public function input($data){
$sql = "insert into jabatan (nama) values (?)";
//prepare statement PDO
$ps = $this->koneksi->prepare($sql); //persiapan
$ps->execute($data); //eksekusi
}
};
?>
```

- controller\_jabatan.php

```
<?php
```

```
include_once 'koneksi.php';
include_once 'models/Jabatan.php';
//1. get request form
$nama = $_POST['nama'];
//2. save to array data
$data = [$nama];
//3. execution button
$tombol = $_POST['proses'];
//create object
$model = new Jabatan();
switch ($tombol) {
case 'simpan': $model->input($data); break;
default:
# code...break;
}
//4. landing page
header('location:index.php?hal=jabatan');
```

- form\_jabatan.php

<h3>Form Jabatan</h3>

<form method="POST" action="controller\_jabatan.php">

<div class="form-group row">

<label for="nama" class="col-4 col-form-label">Nama Jabatan</label>

<div class="col-8">

<input id="nama" name="nama" type="text" class="form-control" required="required">

</div>

</div>

<div class="form-group row">

<div class="offset-4 col-8">

<button name="proses" value="simpan" type="submit" class="btn btn-primary">Simpan</button>

</div>

</div>

</form>
